

## ABSTRACT

The invention provides novel inclusion complexes of highly potent opioid peptide of L-Tyrosyl-D-alanyl-glycyl-N-methylphenylalanyl-glycyl-isopropylamide with cyclodextrin, pharmaceutical preparations containing these inclusion complexes of L-Tyrosyl-D-alanyl-glycyl-N-methylphenylalanyl-glycyl-isopropylamide with cyclodextrin derivatives, <sup>the</sup> ~~same~~ complexes being better soluble in water and having improved biopharmaceutical properties such as lesser toxicity, better analgesic action and non-addiction properties.
